

## **Practical 12 report :- Correlation Analysis of Student Exam Scores**

### **1. Aim**

To analyze the relationship between students' study habits, attendance, previous academic performance, and current exam scores using correlation analysis and visualization techniques.

### **2. Dataset Description**

The dataset `student_exam_scores.csv` consists of the following variables:

<b>Column Name</b>	<b>Description</b>
student_id	Unique ID for each student
hours_studied	Number of hours studied per day
sleep_hours	Average sleep hours per day
attendance_percent	Percentage of classes attended
previous_scores	Scores obtained in previous exams
exam_score	Score obtained in the current exam

**Name :- Priya Gupta**

**Roll no. :- So81**

## 3. Results

### 3.1 Correlation Matrix

```
> print(cor_matrix)
      hours_studied sleep_hours attendance_percent previous_scores exam_score
hours_studied          1.00000000  0.0778643014 -0.0313110929   0.06907820  0.7767514
sleep_hours            0.07786430  1.0000000000  0.0005719021  -0.19425104  0.1882220
attendance_percent    -0.03131109  0.0005719021  1.0000000000   0.05195806  0.2257126
previous_scores        0.06907820 -0.1942510412   0.0519580567  1.00000000  0.4311047
exam_score             0.77675143  0.1882219847   0.2257126046   0.43110471  1.0000000
>
```

### 3.2 Observations

#### 1. Hours Studied:

- Strong positive correlation with `exam_score` ( $r = 0.777$ ), showing that more study hours generally lead to better scores.

#### 2. Previous Scores:

- Moderate positive correlation with `exam_score` ( $r = 0.431$ ), indicating past performance influences current results.

#### 3. Sleep Hours & Attendance Percent:

- Weak positive correlations with `exam_score` ( $r = 0.188$  and  $r = 0.226$ ), suggesting minor impact on exam performance.

#### 4. Other Relationships:

- Most other pairs have very low correlations ( $<0.2$ ), showing minimal linear relationships.

## 3.3 Graphical Representation

### Upper-Triangle Heatmap

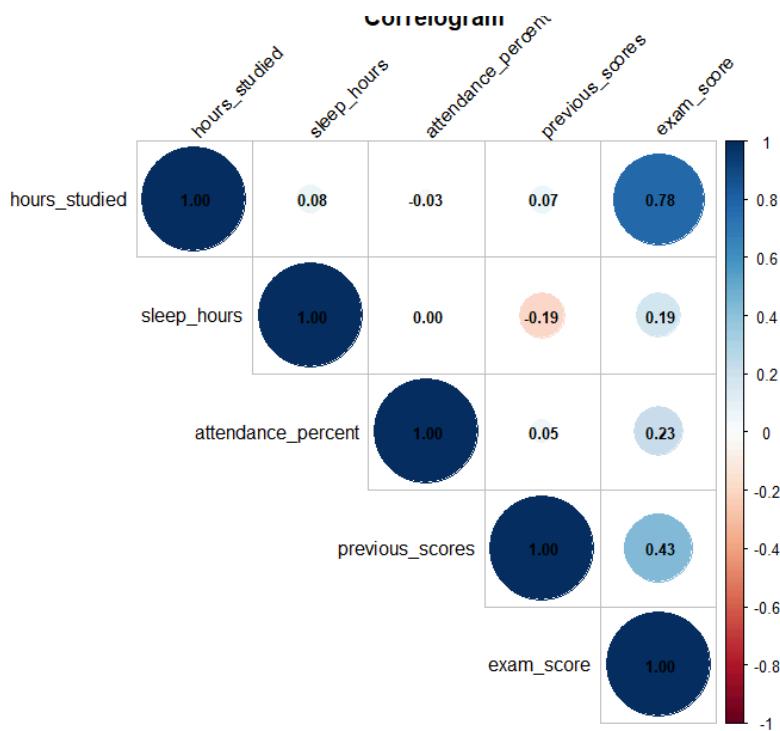

Description: Highlights correlations using color tiles. Red indicates strong positive correlation (e.g., hours studied vs exam score), white indicates weak or no correlation.

Roll no. :- So81

# Sheth L.U.J. & Sir M.V. College

## Correlogram

## 4. Conclusion

- **Hours studied per day** is the most significant factor affecting exam performance, followed by previous scores.
- Sleep hours and attendance show minimal direct impact.
- Visualizations support the correlation matrix, offering a clear understanding of factors influencing student scores.
